BONAFIDE CERTIFICATE

The work embodied in the present project report entitled "**CONNIFY: CONNECT SAFELY**" has been carried out by the students **GANGASH S, GIRIJESH R, GODFREY T R, GRISH NARAYANAN S**. The work reported here is original and we declare that the project is their own work, except where specifically acknowledged, and has not been copied from other sources or been previously submitted for assessment.

Date of Viva Voce: ……

Mrs. R. SATHYA M.E.,(Ph.D).,
SUPERVISOR
Assistant Professor,
Department of CSE,
K.Ramakrishnan College of Technology
(Autonomous)
Samayapuram–621112

MR. R. RAJAVARMAN M.E.,(Ph.D),
HEAD OF THE DEPARTMENT
Assistant Professor (Sr.Grade),
Department of CSE,
K.Ramakrishnan College of Technology
(Autonomous)

INTERNAL EXAMINER **EXTERNAL EXAMINER**

ABSTRACT

Safe communication between strangers in physical proximity is a growing need in modern urban life, yet existing location-aware applications depend on continuously sending raw GPS coordinates to centralized servers, exposing users to tracking, stalking, and location profiling. Standard hashing also fails on GPS data because sensor drift changes the hash completely. To overcome these limitations, Connify is developed as a decentralized, zero-knowledge spatial social and communication initialization platform using React Native, TypeScript, and a Fastify, Prisma, and MongoDB backend. The system introduces the SHARP Protocol, which converts a nine-cell spatial neighborhood into a 1024-bit Bloom filter and applies BCH(15,7) error correction over the Galois Field GF(2^4), so that only 8-bit parity syndromes and blinded SHA-256 hashes reach the server. Nearby peers correct GPS drift on their own device, verify proximity, and complete a hardware-backed Ed25519 QR handshake that issues a short-lived Just-In-Time trust capsule. Real-time Socket.IO communication, an offline fallback, a behavioral risk engine, a hash-chained audit ledger, and a personal safety suite make Connify, now published on the Google Play Store, a private, secure, and practical solution for connecting strangers.

Keywords: Zero-Knowledge Proximity, SHARP Protocol, BCH Error Correction, Galois Field, Bloom Filter, Ed25519, React Native, Fastify, Hash-Chained Audit Ledger

ACKNOWLEDGEMENT

We thank our **Dr. N. Vasudevan**, Principal, for his valuable suggestions and support during the course of my research work.

We thank **Mr. R. Rajavarman**, Head of the Department, Assistant Professor (Sr. Grade), Department of Computer Science and Engineering, for his valuable suggestions and support during the course of my research work.

We wish to record my deep sense of gratitude and profound thanks to my Guide **Mrs. R Sathya** , Assistant Professor, Department of Computer Science and Engineering for her keen interest, inspiring guidance, constant encouragement with my work during all stages, to bring this thesis into fruition.

We are extremely indebted to our project coordinator **Mrs. R Sathya** , Assistant Professor, Department of Computer Science and Engineering, for her valuable suggestions and support during the course of my research work.

We also thank the faculty and non-teaching staff members of the Department of CSE, K.Ramakrishnan College of Technology (Autonomous), Trichy, for their valuable support throughout the course of my research work.

Finally, we thank our parents, friends and our well wishes for their kind support.
